

NABCEP Certified PV Installer

Job Summary:

Affordable Solar is looking for solar technicians with experience in the PV industry, preferably within the large scale commercial sector and also residential installation. The technicians we are looking for must have a passion for the technical side of the industry, always trying to better their skill set and knowledge of products and theory of photovoltaic.

Essential Functions

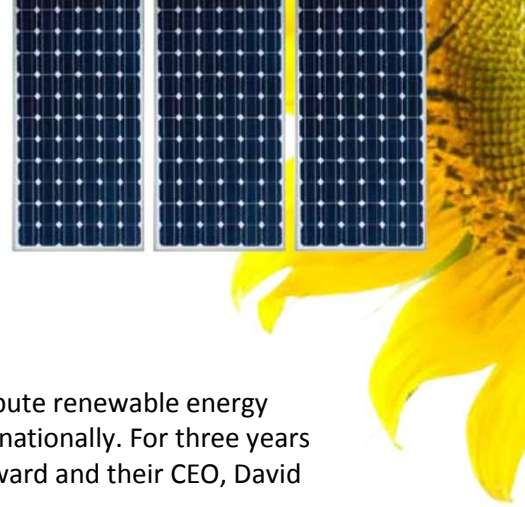

- Review single lines and verify all electrical calculations
- Inspect newly built solar facilities and verify construction as per plans
- Document findings and produce reports for customers
- Troubleshoot performance issues and faults
- Install and troubleshoot data acquisition systems
- Perform routine maintenance on all PV related equipment
- While in the field, you will be the sole person representing our company. You must be able to present yourself in a professional manner.

Requirements:

The ideal candidate must have the following skills and qualifications:

- NABCEP Certified
- PV installation or Management experience
- Computer skills - Excel, Word
- Clean driving record and background
- Skill at taking irradiance, voltage, current readings
- Ability to gather data accurately
- Previous experience with mid to large scale solar facilities

About the Organization:

Affordable Solar is based in Albuquerque, New Mexico. We design and distribute renewable energy systems for residential, commercial and industrial use domestically and internationally. For three years in a row, Affordable Solar has won the Best Places to Work in New Mexico award and their CEO, David Hughes, won the Top Performing CEO award.

Classification:

Full time, salaried, exempt Salary: to be determined based on education and experience.

To apply, please submit a cover letter and resume to sales@affordable-solar.com
